Hello and welcome to your new pair of Slappa's Thongs!

Slappa's Thongs have built-in arch support and are designed to support and mould to your feet. In the beginning your Slappa's may feel a little different to other flip flops; they may feel tighter or firmer than you're used to, but this ensures proper support. They *will* soften and mould to your feet though and soon you'll never want to take them off!

Here are some tips to help you soften and mould your Slappa's more quickly. For more information you can visit the FAQ's section on our website: www.slappasthongs.com

Wear your Slappa's in the shower – The hot water will soften the EVA foam and when you move your feet around in them it will gently stretch the material

Place your Slappa's outside in sunlight for 5 – 10mins to warm them up and make the foam more malleable then place on your feet and walk around in them.

If the toe piece or straps are too tight you can loosen them by gently massaging with your fingers and stretching the foam very carefully (Note: never pull on the straps or toe piece and always support the join areas so you don't snap/break straps)

The above instructions are for if the shoes feel too firm but not if they are too small (i.e your heel sits over the back of the thong). If your Slappa's Thongs are not the right size, please follow the below instructions according to your location:
